- **JavaScript**
- **HTML**
- **CSS**
- **oops concepts**
- **DSA**
- **Git -Hub**

### PROJECTS

#### **Invoice-Genrator:** (<https://invoice.asyncit.in/>)

The Async Invoice Project is a modern, single-page application built with React.js that allows users to create, preview, and manage invoices asynchronously. It offers a smooth, responsive interface designed for freelancers, businesses, or service providers needing lightweight invoice automation..

#### **Pokedex:** (<https://pokemoneapi23.netlify.app/>)

The Pokedex project is a fun and interactive single-page app that fetches data from the Pokémon API and displays it in an intuitive UI. Built with React and styled-components.

#### **To-Do:** (<https://reacttodoapp23.netlify.app/>)

To-Do Webapp is a React-based project for managing a personal to-do list. Users can add tasks, mark them as completed, or delete them.

#### **Notes-webpage:** (<https://postapi23.netlify.app/>)

Notes webpage is a webpage built using React.js and Axios that implements full CRUD operations. It demonstrates how to post, edit (update), and delete data using an existing API with Axios commands and React Hooks.
